DETAILED ACTION

Allowable Subject Matter

1. Claims 1-20 and 22-32 allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

Prior art failed to establish a thin film transistor on an liquid crystal display device where the drain electrode is formed on an ohmic contact and the drain electrode has an uneven width.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 21 rejected under 35 U.S.C. 103(a) as being unpatentable over Hebiguchi et al. (6,707,441) in view of Yamauchi (JP 200002156)

Hebiguchi et al. disclose an active matrix type liquid crystal display device and substrate for the same where in Fig. 17 it shown gate and data lines and thin film transistors are formed at the crossing points of data and gate lines and drain electrode is connected to the pixel electrode. Hebiguchi et al. fail to disclose the uneven width requirement of the drain electrode. However, Yamauchi discloses a thin-film transistor and array where in Fig. 3, drain electrode 10 has a T-shaped uneven portion at the location where it is overlapped with gate electrode 5.

Art Unit: 2826

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required uneven portion in drain electrode in Hebiguchi et al as taught by Yamauchi in order to have a thin film transistor structure with increased reliability.
